

EXACT-A-PITCH[®]

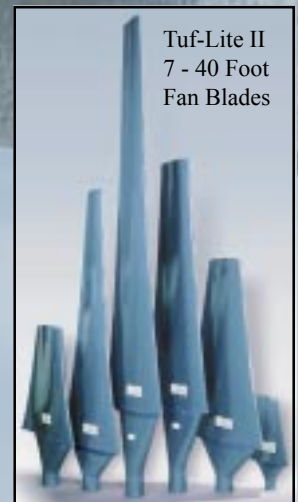

Hudson Products Corporation's new Exact-A-Pitch digital protractor is a state-of-the-art instrument used for precise setting of fan blade pitch for the purpose of increasing fan efficiency and improving fan blade life.

Exact-A-Pitch resolves the mystery of fan blade pitch setting common to the use of conventional bubble protractors. Exact-A-Pitch instantly displays a digital readout to tenths of a degree of pitch angle when placed on a blade tip. Built for field use, the Exact-A-Pitch's rugged electronic sensor, microprocessor, and liquid crystal display are housed in a high-impact composite case with a rugged aluminum base bar. An instruction manual accompanies the Hudson's digital protractor for easy reference and use.
